

The Cupar Museum will once again be hosting their annual Harvest Lunch at the Legion/Library
October 1st from 11:00 am to 1:00 pm.

Premier Brad Wall has declared 2016 as the year of the Ukrainian in Saskatchewan, and therefore as our Culture Days Celebration, we will have a display of illustrations of Ukrainian Christmas with brief explanations. This display will be in conjunction with the Harvest Lunch at the Legion.

Come on out! We will see you there!

I am sure you have noticed that there is some building action going on at the Town shop yard. Well we are please to say the Cupar Fire Department will be getting their new building to house the Fire Truck in. As it is being built we will try to keep everyone updated on the progress and make sure the pictures make it in the newsletter for memories. We are excited to see this new build and are looking forward to when the Fire Department will have their own building.

To avoid cankerworm problems in the spring, band your trees in the fall by September 15th or before the first frost. Bands remain on the tree over winter. In late winter or by March 15th, check your bands to see if more sticky substance of choice should be applied to protect the tree against the spring cankerworm. If the band is coated with moths and other debris, the spring cankerworm moth can crawl over the band. A fresh application may be required.

TO BAND YOUR TREE USING FOIL-FACED INSULATION

Cut a 15-centimetre-wide band of foil-faced insulation long enough to wrap around the tree trunk.

Place the insulation side on the bark so that the foil is on the outside. About 1.5 metres from the ground, tightly staple the band to the tree trunk. Make sure you fill in the bark's cracks and crevices.

Spread a layer of Tree Tanglefoot on the band.
